

To simplify the app flow, I made it so that Assessments can be accessed through the consolidated View/Edit course page. Once users navigate to the list of Assessments, they will need to click on a button next to each assessment to access the consolidated View/Edit Assessment page. This was done so there wouldn't be too much data on the list of assessments. The Add Assessments page is similar, but has an option to add a Due Date, since I didn't realize that was required when making these wireframes. The Edit Assessment page also had a Due Date field added for that reason, and I moved the Assessment Type picker down so the name field would be first. I also added the Delete Assessment button to that page as I forgot to add it with the initial wireframes.

With these changes considered, the app matches these wireframes.
